- Oracle
- SAP HANA
- PostgreSQL
- IBM DB2
- MySQL
- MongoDB

Unstructured Data

- NAS
- File Share
- Object Storage

Veeam Data Cloud Vault

Secure, Immutable Cloud Storage

Latest Release: Veeam Data Platform v13

Secure by design, instantly recovered, and guided by AI.

Security Transformed

- Veeam Software Appliance: pre-configured, hardened, best practices baked in
- Enhanced RBAC for least-privilege access
- SAML for SSO to centralize identity and streamline compliance

Outcome: Security-first architecture with a pre-hardened appliance and automated patching strengthens security posture, reduces privilege escalation risk, and simplifies compliance.

Next level Resiliency

- Highly Available backup services so protection is always ready
- Instant Recovery to Azure for verified clean restores in moments
- Modern Web UI + Veeam Updater for simple management & automated lifecycle

Outcome: With a highly available appliance, backup services remain online through disruption and confirmed clean restore points bring back production services into Azure within minutes.

AI-Powered Intelligence

- Veeam Intelligence for plain-language answers, anomaly explanations, and recommended next steps
- Malware Analysis Agent to assess integrity and clean points
- Deep Data Analysis Agent for on-demand observability

Outcome: Automate reports, identify anomalies, and react in minutes with new interactive reporting that cuts investigation time and reduces blind spots.

You've got enough on your plate. Veeam Software Appliance is built as a secure, ready-to-run solution that just works.

Simple to Deploy

- Fully pre-configured solution with "just enough" OS and Veeam software
- Flexible installation media (ISO) or Virtual Appliance (OVA)

Outcome: Be productive with the peace of mind that your data is protected sooner than you expected.

Secure from Day One

- DISA STIG hardened OS
- Automated and centralized security updates
- Tight access controls with Zero Trust operations

Outcome: Automatic updates and tight access controls keep you safe without additional work or worry.

Manage from Anywhere

- Modern, next-gen web UI
- Seamless integration with single sign-on (SAML)
- Enhanced RBAC for your key roles

Outcome: Freedom to work on your terms by effectively managing secure protection from anywhere.

Zero Trust Data Resilience

with Veeam Data Cloud Vault

Separation of backup software and storage

Segmentation, air-gapping and least privilege access

Multiple Resilience Zones

3 copies of data, 2 different media, 1 offsite

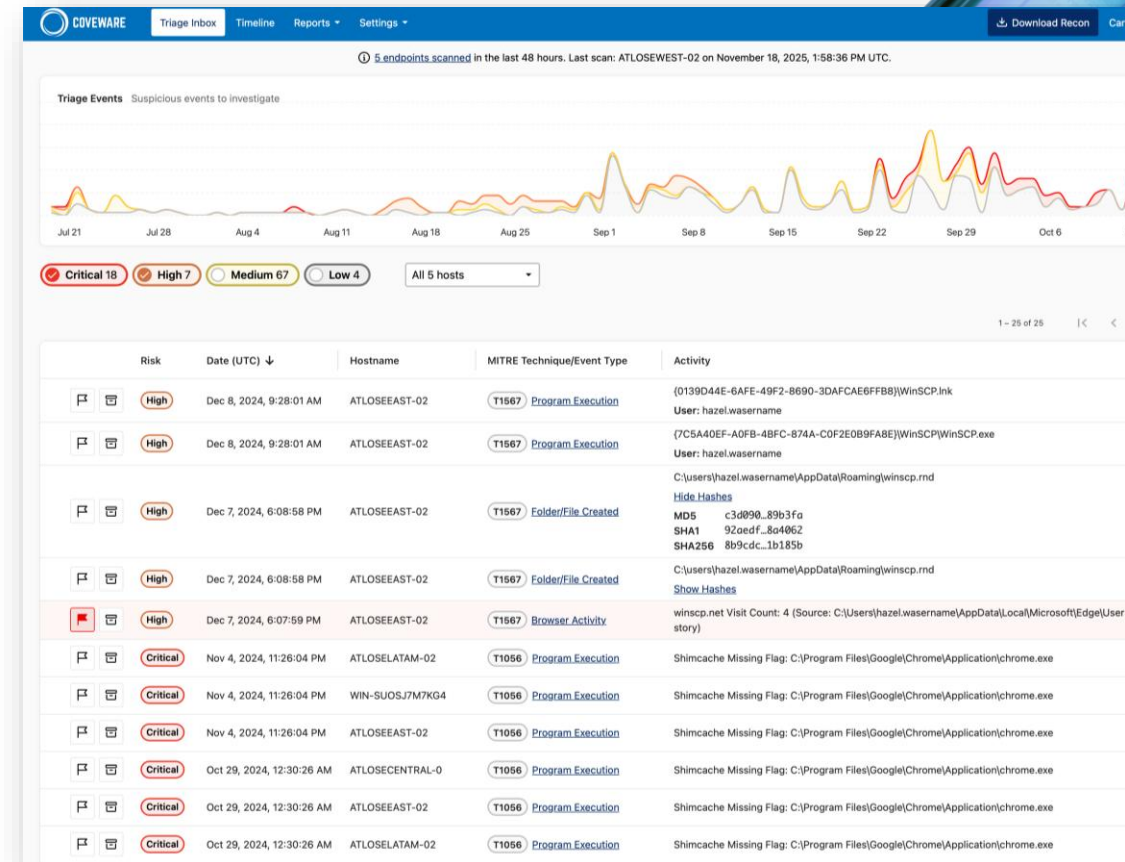

Immutable and Encrypted

Protecting data integrity and confidentiality

Recon

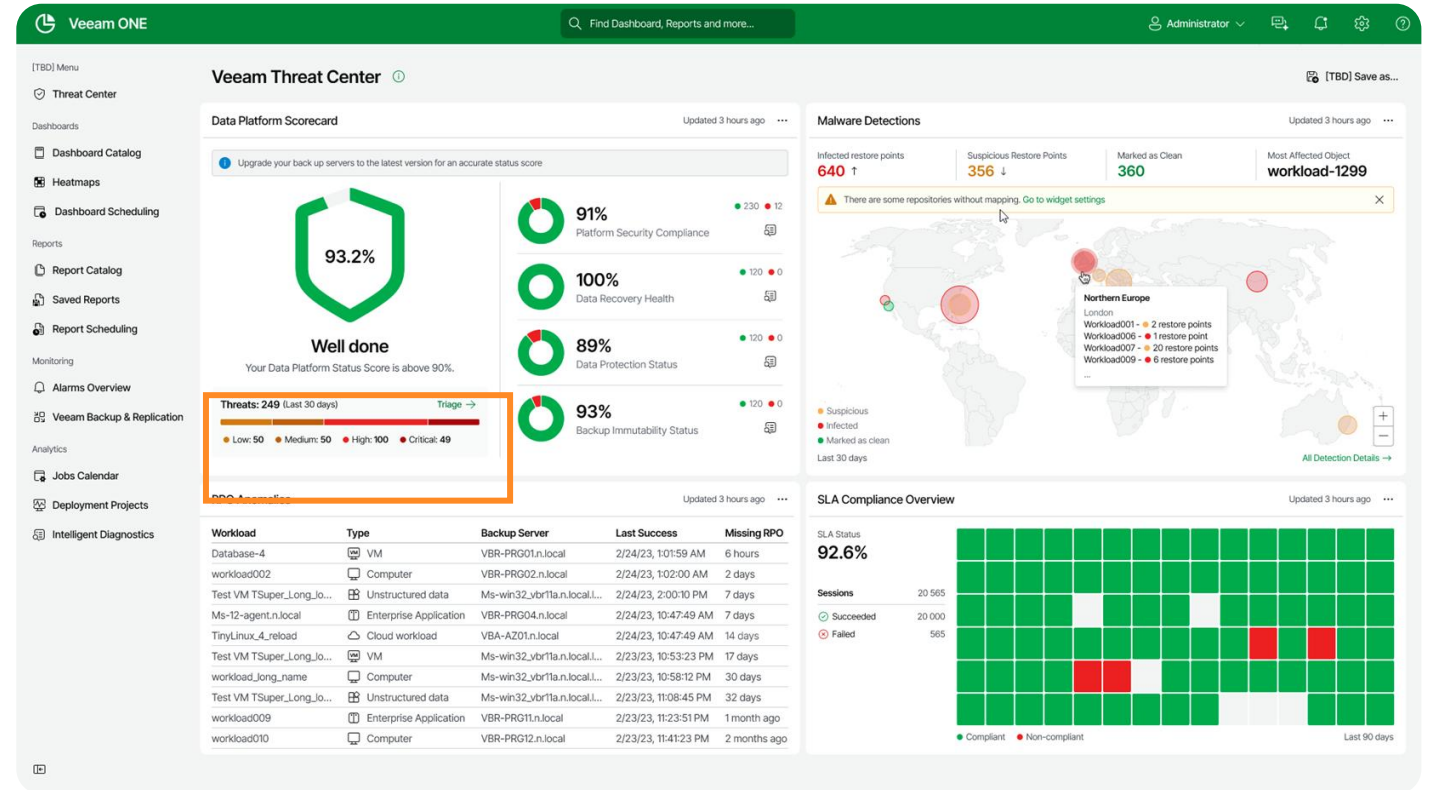

Proactively detect attack behavior inside your backup environment before data is encrypted or exfiltrated.

- Deployed on **Veeam Backup & Replication** and other servers in the Veeam environment such as **proxies, gateways, and servers running Active Directory** (up to 10 servers).
- Fast collection of **logs, event, networking processes, system information**. Secure uploads to Coveware cloud environment.
- Automatic mapping to **MITRE ATT&CK framework Tactics, Techniques, and Procedures (TTPs)** and Coveware ransomware indicators

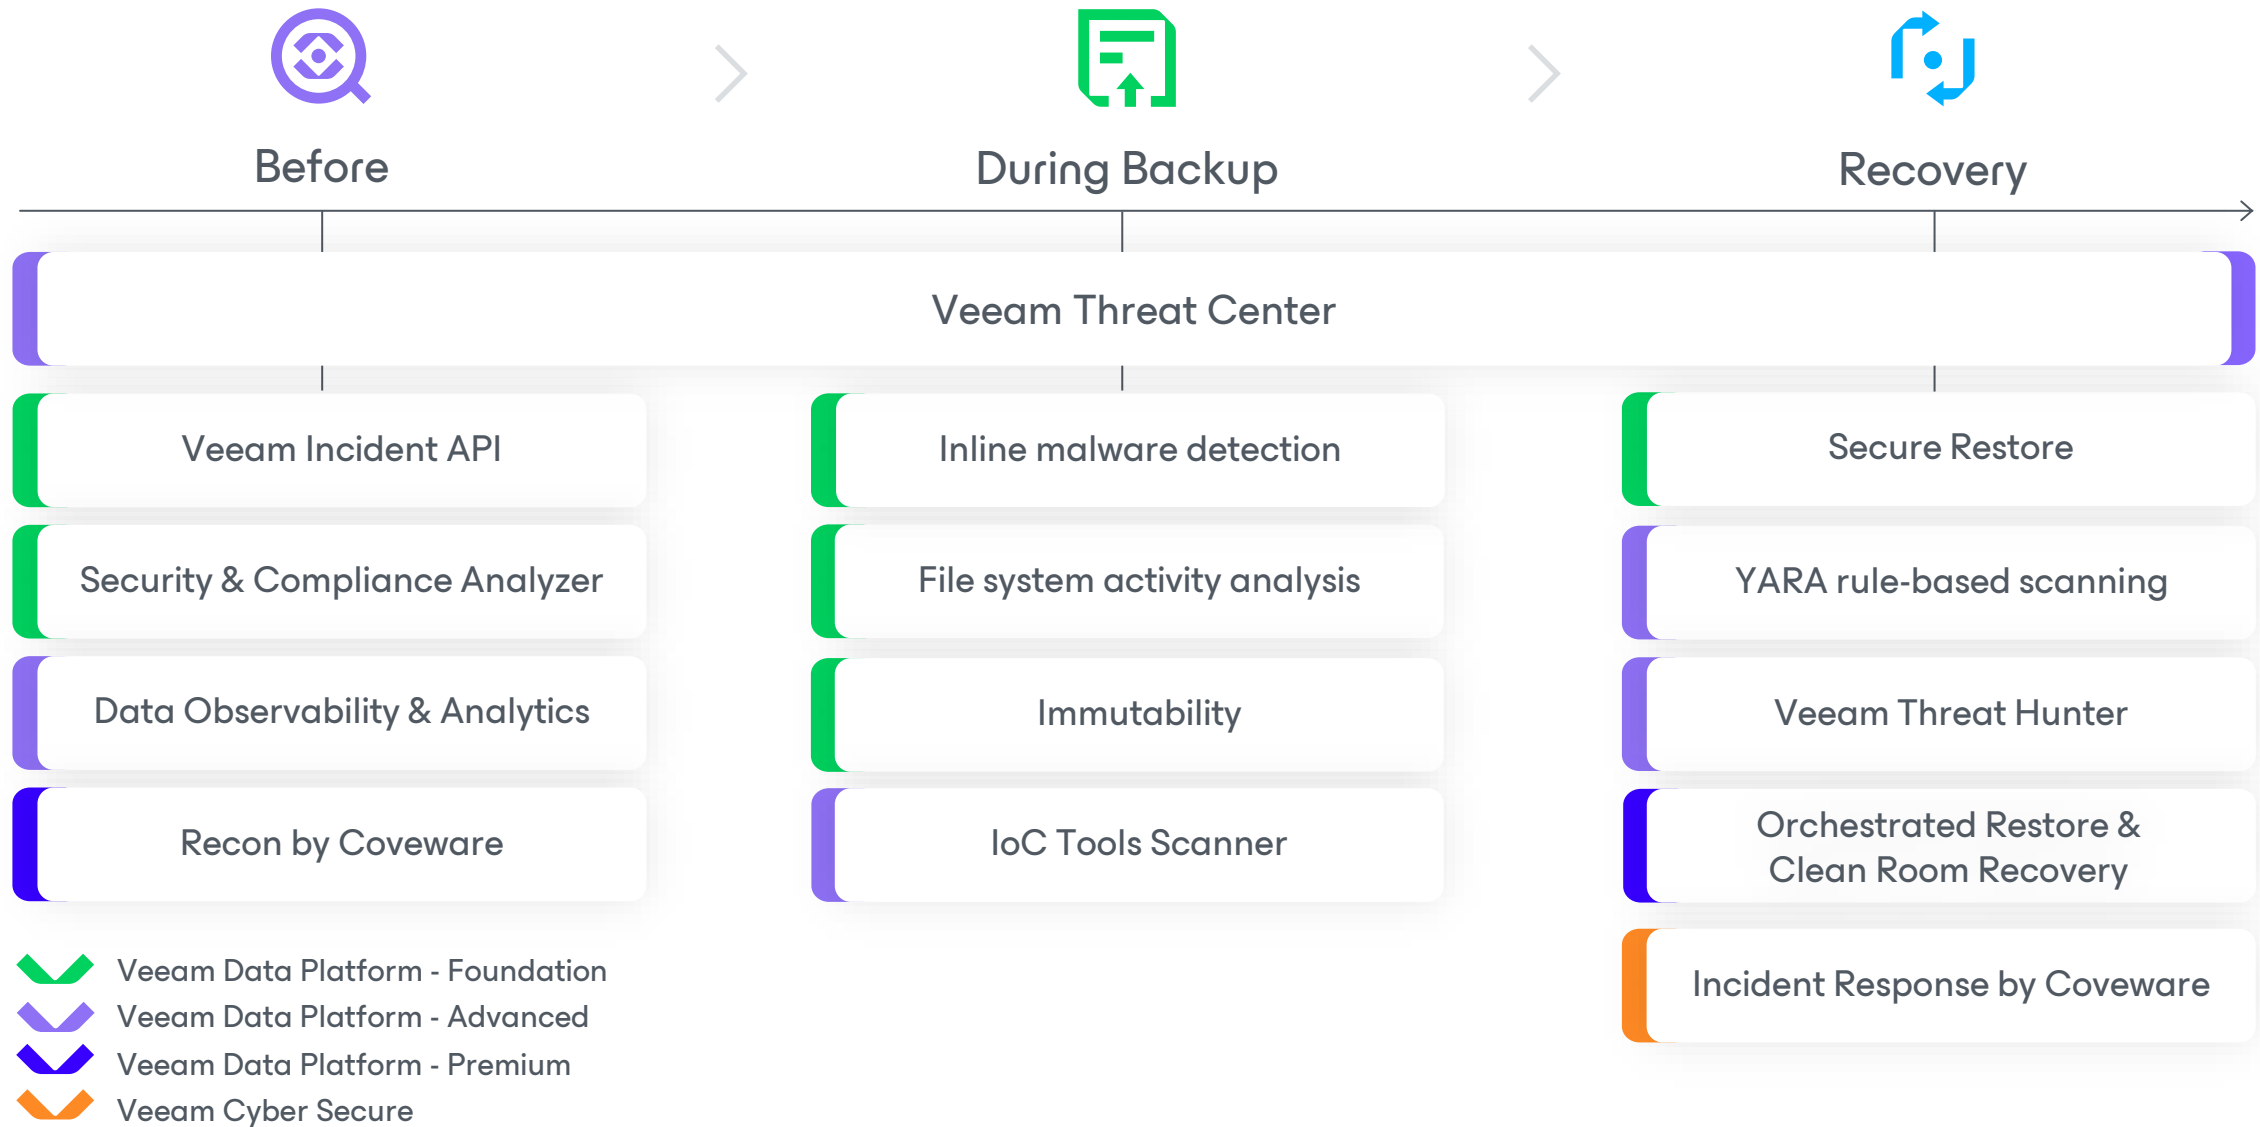

Integrations: Correlate backup threats with your broader security signals

- Recon findings can be shared directly with **Veeam ONE** and **Microsoft Sentinel** using the built-in API.
- **Veeam ONE** displays Recon findings in the Threat Center for centralized visibility.
- **Microsoft Sentinel** correlates Recon data with other security signals for faster detection and response.

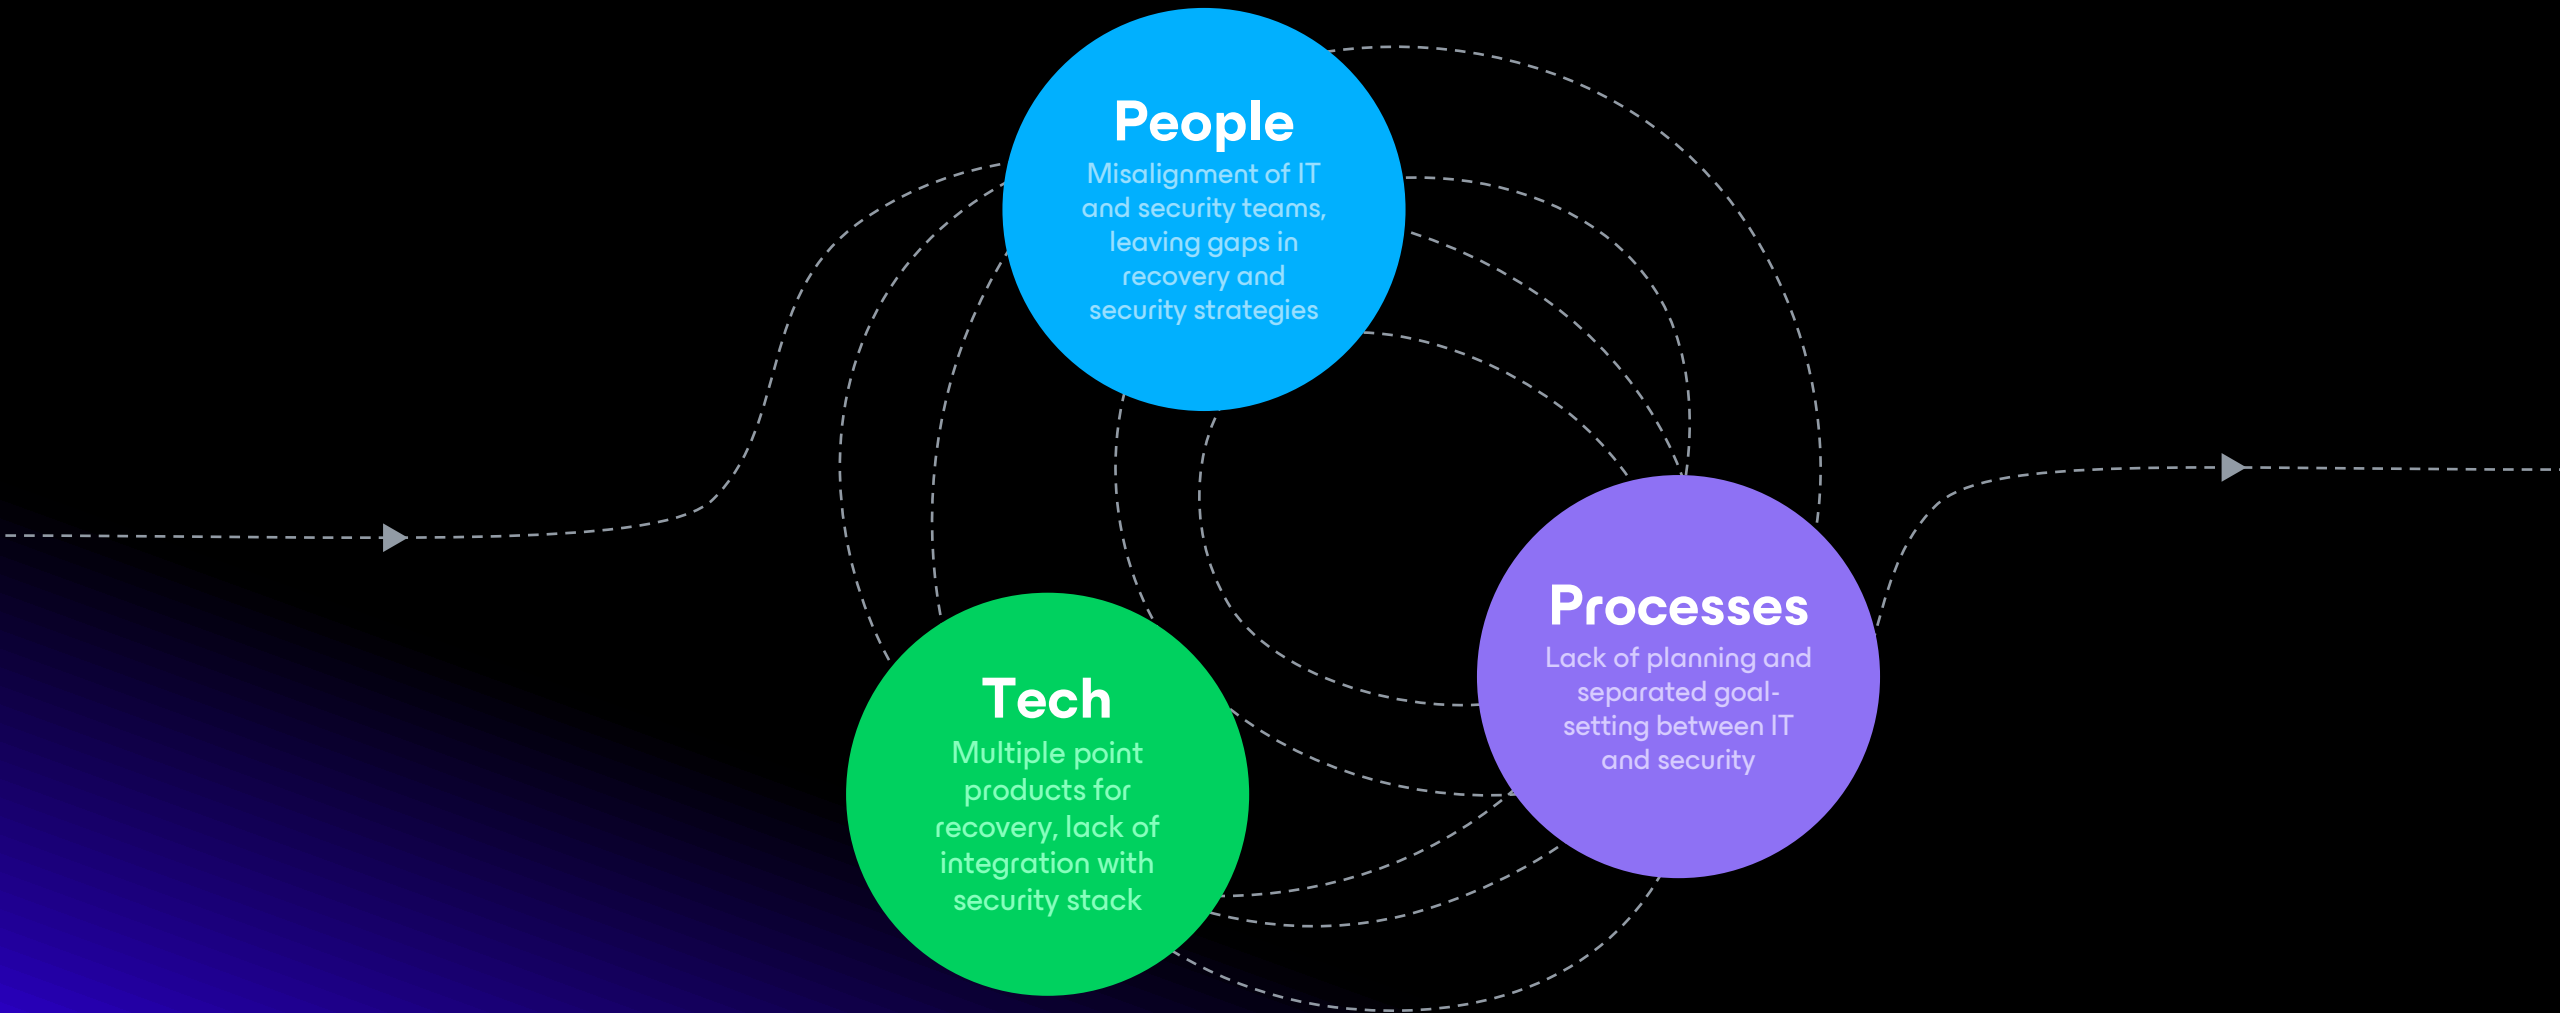

End to End Resilience Throughout Your Data's Lifecycle

**Plan for DR
before you need it**

Technology alone won't solve for true **resiliency**

Malware Detection

Check ransomware flags from Veeam Backup & Replication – Antivirus Scan and YARA Scan

Flexible recovery options

Choose restore point and scan up to X previous points:

- If infected, cancel restore, *or*
- Restore without network connection

The screenshot displays the 'Malware Scan' configuration window. The 'Malware detection' section is active, showing 'Restore points: 1' and 'Scan methods' with 'Malware flag check', 'Virus scan', and 'YARA scan using rule file:' selected. The 'YARA scan using rule file:' option has a 'Choose...' button highlighted. A 'Select YARA Rule' dialog is open, showing a search bar and a table of YARA rules.

Nickname ↑	Description

Manage YARA Rules

Reign in YARA sprawl

Import YARA rule files

Preview and manage YARA rule versions

Automate distribution

The screenshot displays the Veeam Recovery Orchestrator interface. On the left is a navigation sidebar with categories: Exit Administration, Overview, Connections, Infrastructure, Recovery (Recovery Locations, Recovery Steps), Security (Scopes, Roles, Inventory Access, Credentials), and Server (Settings, Mail, License, Logs, About). The main area is titled 'YARA Rules' and contains a search bar, action buttons (+ Add, Edit, Download, Remove), and a list of rules with checkboxes. A modal dialog titled 'Add YARA Rule' is open on the right, with the following fields: 'YARA file:' with a 'Browse...' button, 'Nickname:' with a text input, 'Description:' with a text area containing 'Imported by vps/matt.crape on 12/10/2025 4:44 AM', and a 'Preview:' section showing 'No file loaded'. 'Save' and 'Cancel' buttons are at the bottom of the dialog.

Veeam Recovery Orchestrator

Compliance

RTO and RPO reporting help meet compliance standards and SLA targets

Clean Recovery

Restore the most recent clean recovery point, powered by iterative ransomware scans and VBR-backed intelligence

Dynamic Documentation

Automatically updated reports for checks, tests and executions help correct issues with DR readiness

Recovery to Cloud

Orchestrated Direct Restore to Microsoft Azure gives your business resiliency with DR to the cloud

Supported platforms and applications:

Azure, vSphere,
Hyper-V

Veeam Agents:
Windows & Linux

Apps:
Exchange, SQL, SharePoint

Storage:
NetApp, HPE, Lenovo

Custom
scripting

Day to Day Resilience

Instant Answers, Custom Dashboards, Smart Reports

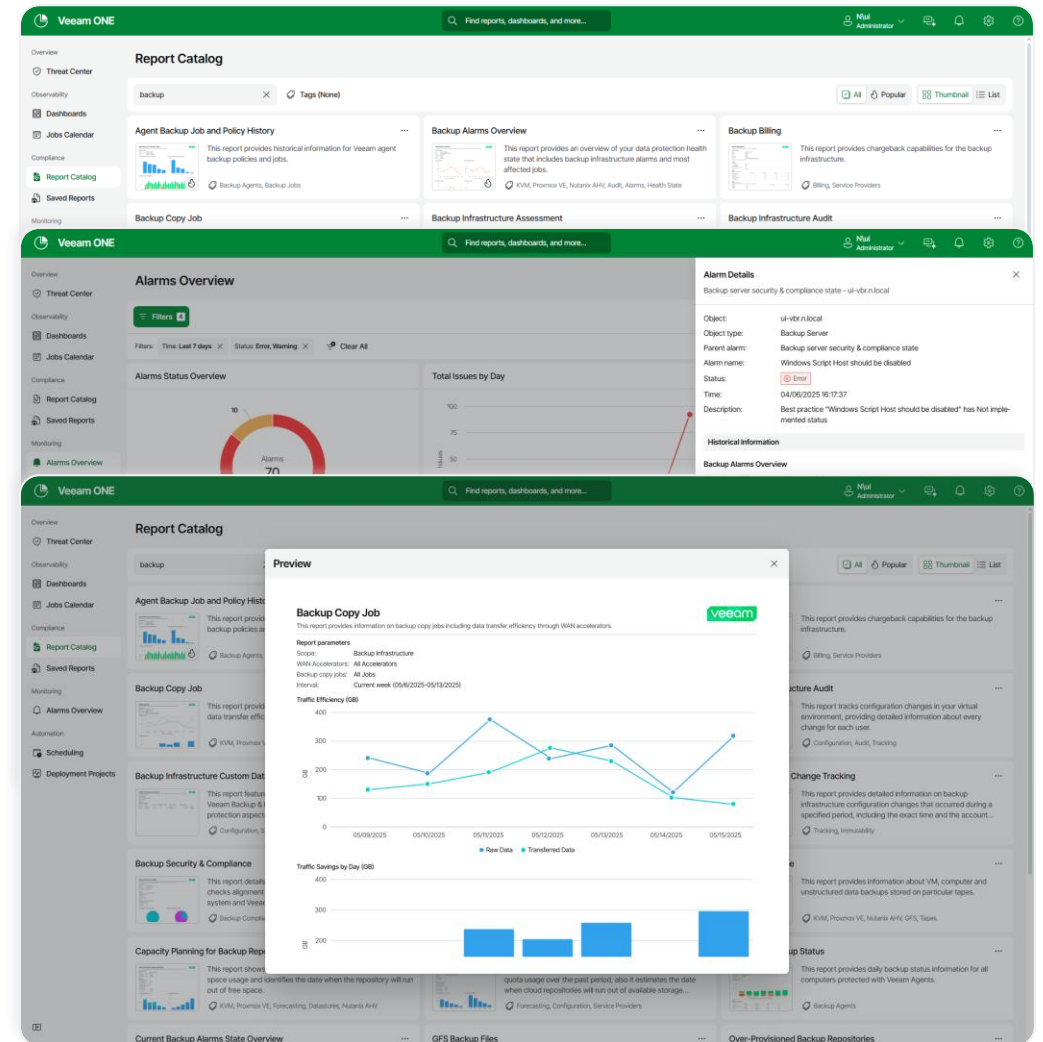

Dashboards, Reports and Global Search

Global Search — Quickly find dashboards, reports, folders, and widgets in one place for faster access to insights.

Dashboards Catalog — Browse and customize dashboards easily so every role gets the view that matters most.

Reports Catalog — Discover and share key reports without rebuilding, accelerating analysis and decision-making.

Alarms Overview — Pinpoint alarms by location for rapid troubleshooting and clear operational visibility.

Embedded Analytics

Dashboards and Reports available where you are

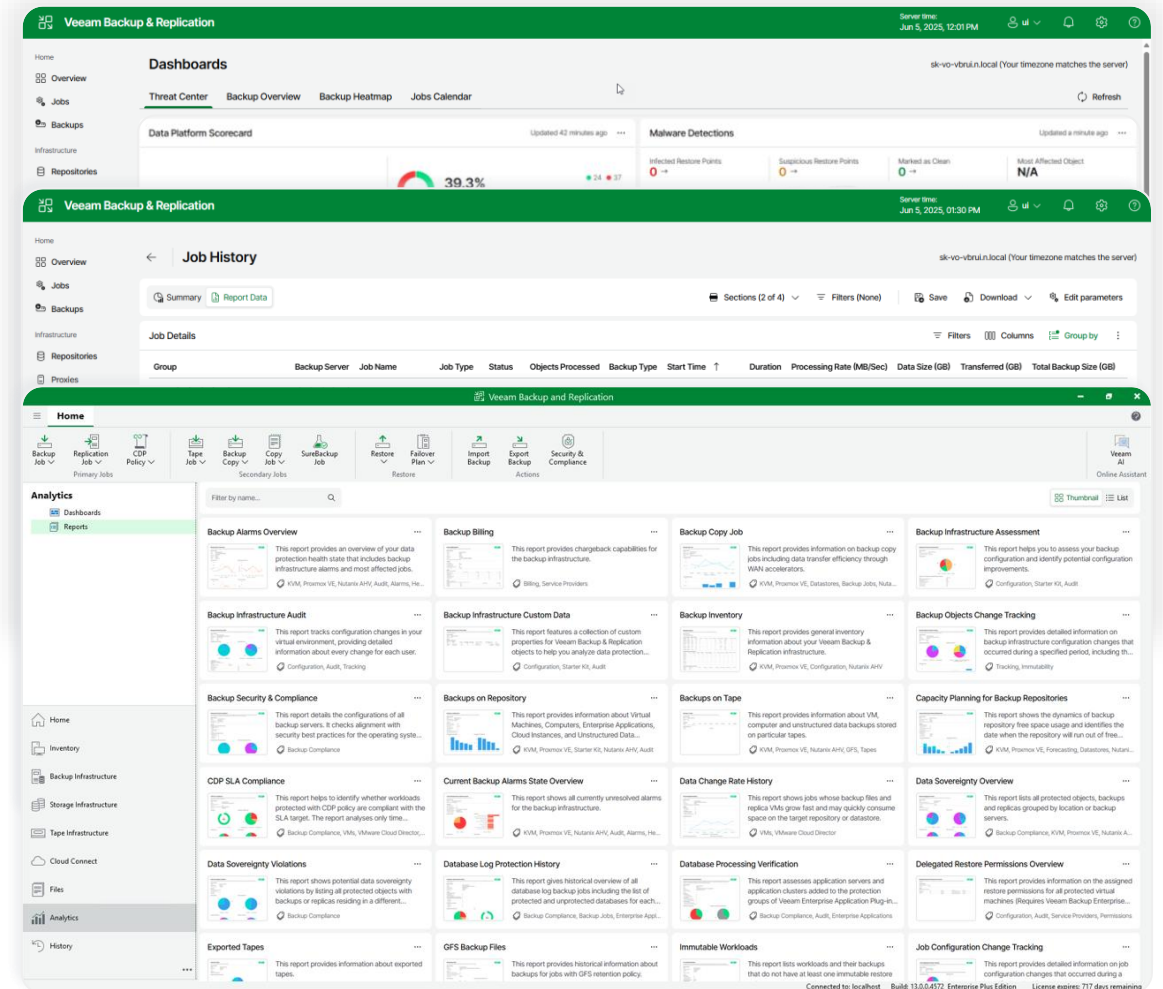

Dashboards and Reports — Easily Available.

Access catalogs inside the Backup and Replication UI so you get insights instantly without switching tabs or logging into another interface.

Filter by Tags — Use tags to search and organize your reports library. Tags let you group VMs, workloads, or repositories by business unit, environment, or any custom criteria. This makes it easy to report on exactly what matters.

Popular Reports at Your Fingertips —

Instantly access the most-used reports through the new Report Catalog, which surfaces trending and frequently accessed reports for faster decision-making.

Data Resilience Daily Summary

- **Receive** a clear, straightforward summary of job statuses across your entire environment.
- **See** errors grouped by workload, making large-scale troubleshooting faster and easier.
- **Get** context-aware recommendations with direct links to trusted sources for quick resolution.
- **Quickly match** error codes to their meanings, making it easier to find solutions and escalate issues when needed.
- **Cut through** alarm clutter and keep operations running smoothly after deployment.

Data Resilience Daily Summary

24-hour overview of backup sessions, top issues, and recommended actions.

53
Total Sessions

9
Errors

What's happening and what to do next

Issue	Affected workloads	Recommendation	Action
Virtual machine unavailable during backup		Ensure the VM is powered on and accessible for backup.	See details >
No available workers for backup jobs		Ensure sufficient worker resources are allocated and available.	See details >
No available worker found for job		Ensure sufficient workers are configured and available in the cluster.	See details >
No objects to process in SQL backup		Ensure SQL databases are included in the backup job settings.	See details >
All objects excluded from backup job		Review job settings to ensure necessary objects are included.	See details >

See it in action!

Enterprise Ecosystem Integrations

Seamless integration across your security, ITSM, and IT tools on your terms.

VCS Foundation

Protect

- Dedicated Program Manager
- Yearly Architectural Review and Data Resilience Maturity Assessment
- Cyber Security Engineer Training

Prepare

- Quarterly Security Assessments
- Executive Assessment Report
- Incident Response Toolkit
- Quarterly Threat Actor Intelligence Security Briefings

Prevail

- Incident Escalation Fast Track

Additional Offerings in VCS Premium

Technical Account Manager

- Builds alignment across people, process and technology to maximize your Veeam investment
- Identify and ensure success for data resilience needs

Cyber Extortion Readiness and Response Retainer

- 24/7/365 response team
- 15-minute response SLAs directly with Coveware by Veeam
- Platform/System-agnostic

Ransomware Warranty

Up to \$5M Ransomware Expenses Warranty *

Requirements:

- TAM
- Quarterly Security Assessment Compliances
- Latest version of VDP (Advanced or Premium) and/or Kasten

The Veeam logo is displayed in white lowercase letters within a white-outlined rectangular box with rounded corners. The box is centered horizontally and partially overlaps a large, light green abstract shape that resembles a stylized 'V' or a mountain range. The background is a solid green gradient.
