

Block out. Break through.

Unlock uninterrupted performance with HP Poly Focus 6 series

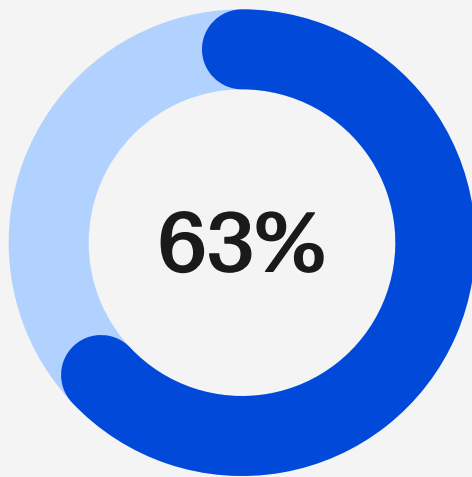

Why the right headset is critical to productivity, the employee experience, and hybrid work success.

The right headset is now business-critical

Hybrid work isn't a trend anymore—it's the standard operating model.

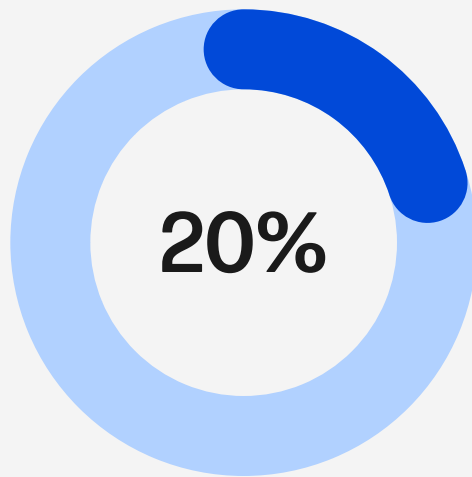

52% of remote-capable employees are in hybrid arrangements.

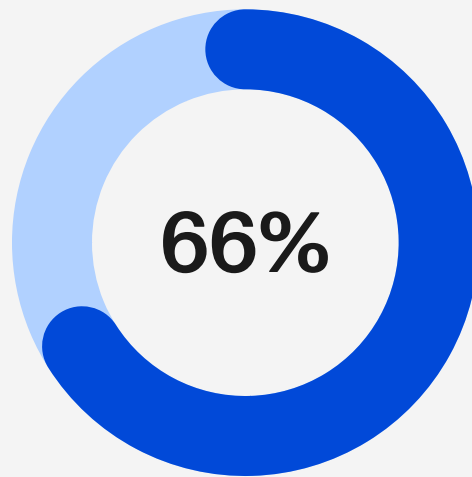

63% of organizations globally expect remote work to grow by 2028.^{1,2}

At the same time, the tools supporting hybrid work haven't kept pace.

20% of knowledge workers are confident their organization has the right technology to support hybrid work.³

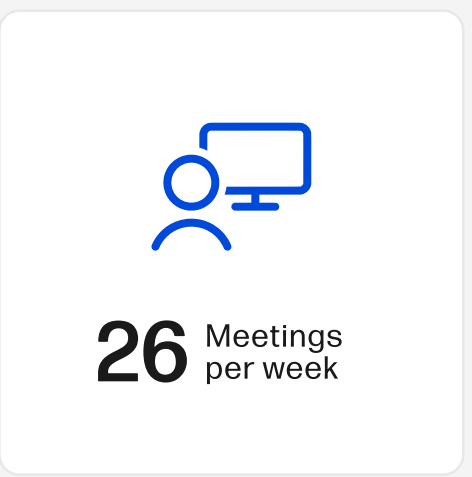

66% of global workers say inadequate work setups negatively impact their performance.⁴

At the same time, the tools supporting hybrid work haven't kept pace.

Meeting time has increased 252% since 2020.

with the average knowledge worker's calendar now containing 26 meetings per week.⁵

Headsets have become business-critical.

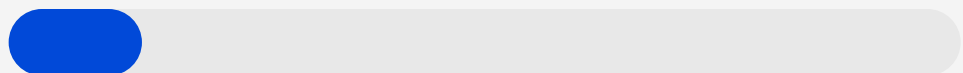

When the workday depends on calls and virtual meetings, comfort and usability directly shape productivity and employee experience. Small breakdowns—dead batteries, dropped connections, poor voice pickup, clumsy controls—don't stay small. They compound across every meeting, across teams, and across the day.

The interruption tax: where hybrid work breaks down

Hybrid work introduces friction in predictable places.

Transitions that shouldn't be hard

14%

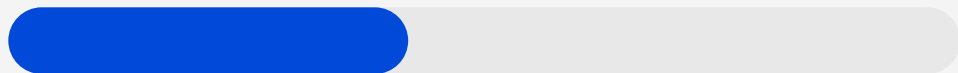

of employees say it's easy to transition between locations.³

When people move between home, office, meeting rooms, shared spaces, and cafés, performance should travel with them. Too often, it doesn't.

Focus that's harder to protect

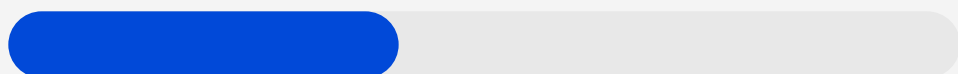

The modern workday is noisy. Hybrid workers say

Receiving phone calls

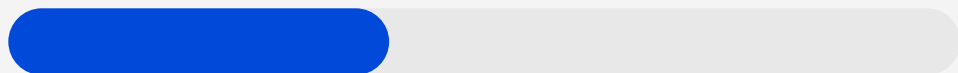

42%

Background noise

41%

Colleague interruptions

40%

are the top three most significant disruptors.⁶ These workplace distractions hinder focus and productivity.

Employee experience impacts results

The right tools support diverse working styles and bridge the gap between remote and in-office teams.

Tools that reduce daily friction lead to happier employees. And, research shows organizations that prioritize employee fulfillment are.

×2

more innovative

23%

more profitable

51%

lower turnover³

The right headset impacts people, performance, and productivity

Not all headsets deliver the same experience, and the difference shows in how people work.

When the tools employees rely on every day are designed to perform consistently, small improvements quickly add up.

Conversations flow more smoothly. Transitions between spaces feel seamless. Focus lasts longer. And over the course of a full day of meetings and tasks, that consistency becomes a measurable advantage.

Research shows high-quality headsets don't just improve audio—they directly influence how people perform. The right headset **delivers**:

Higher-quality work:

43%

say headsets make it easier to do high-quality work⁷

Greater productivity:

41%

report improvements in workflow and task completion⁷

Clearer conversations:

41%

say better audio makes calls more effective⁷

More flexibility:

41%

value the ability to move and work across different spaces⁷

Stronger focus:

38%

say headsets help them maintain momentum throughout the day⁷

These gains aren't isolated—they compound.

**For individuals, it's confidence and flow.
For organizations, it's consistency at scale.**

17 hours/week
in headsets on average⁸

And in a world where people spend time in headsets, performance isn't defined by occasional peaks—it's defined by what holds up day after day.

Because when everything just works, people do their best work.

Introducing HP Poly Focus 6 series

HP Poly Focus 6 series is a family of wireless headsets designed for modern hybrid work—where people move between spaces, meetings stack up, and performance needs to stay consistent.

It's built around one promise:

Uninterrupted performance—wherever work happens.

Comfort and mobility that fit hybrid movements

Noise control and call clarity that hold up in real environments

Battery life and charging speeds that keep pace with unpredictable days

Wireless freedom without connection drop-offs

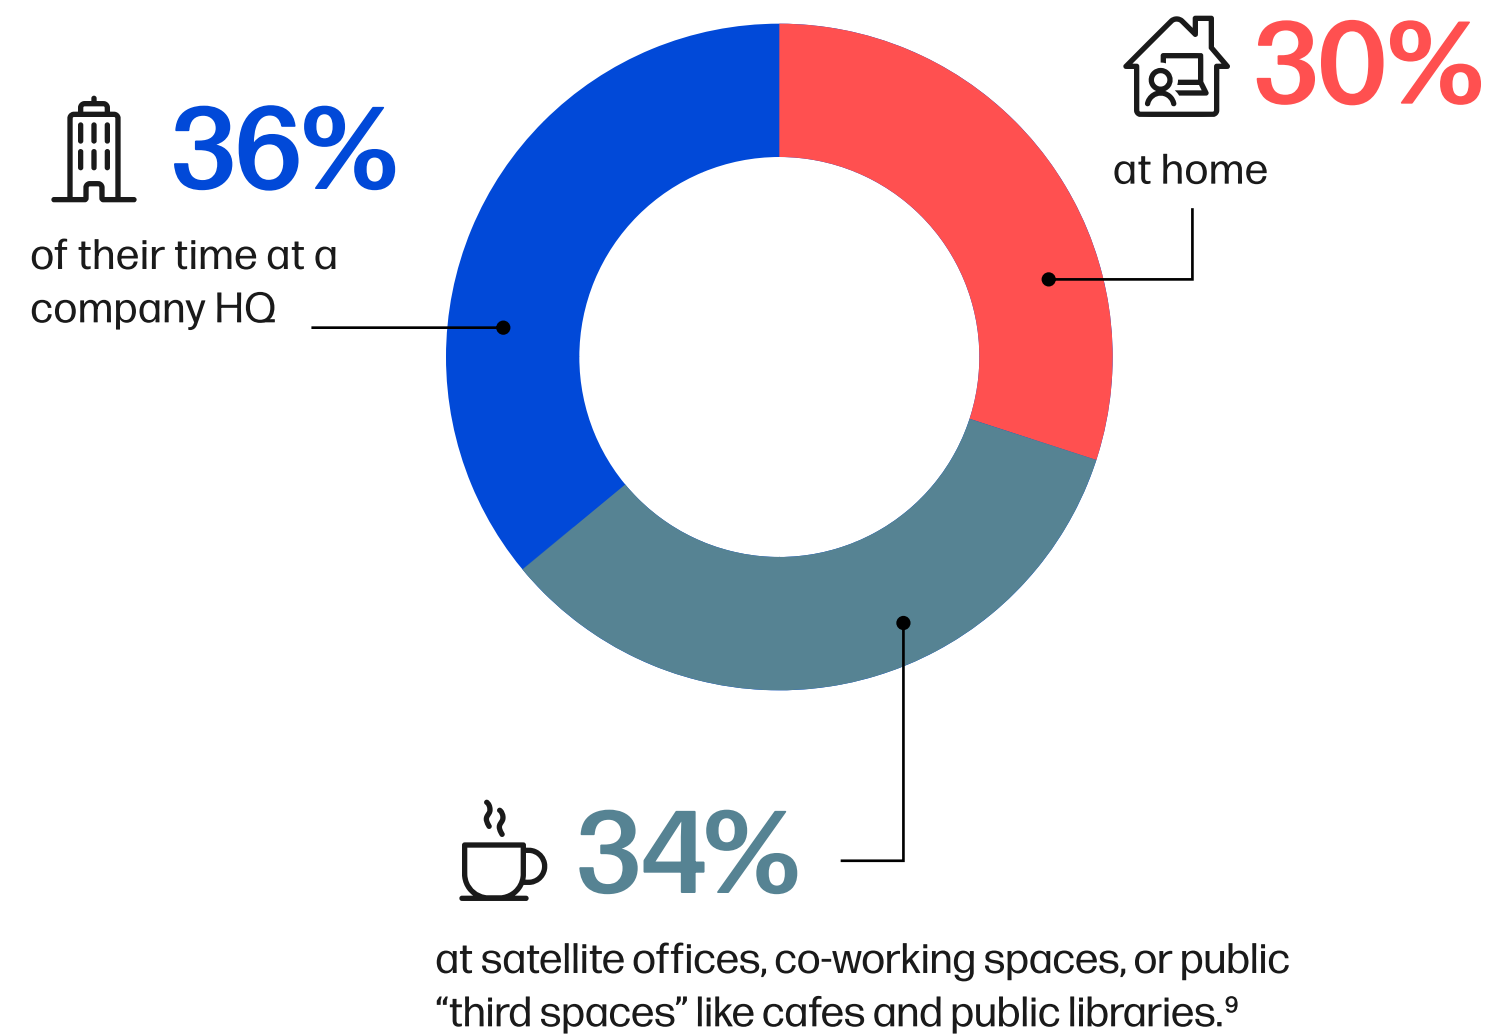

Intuitive controls that reduce friction

Lifecycle features that support long-term fleet value

Mobility that **matches** hybrid work

Work happens everywhere, and employees need tech that performs wherever it's needed. Employees want to spend.

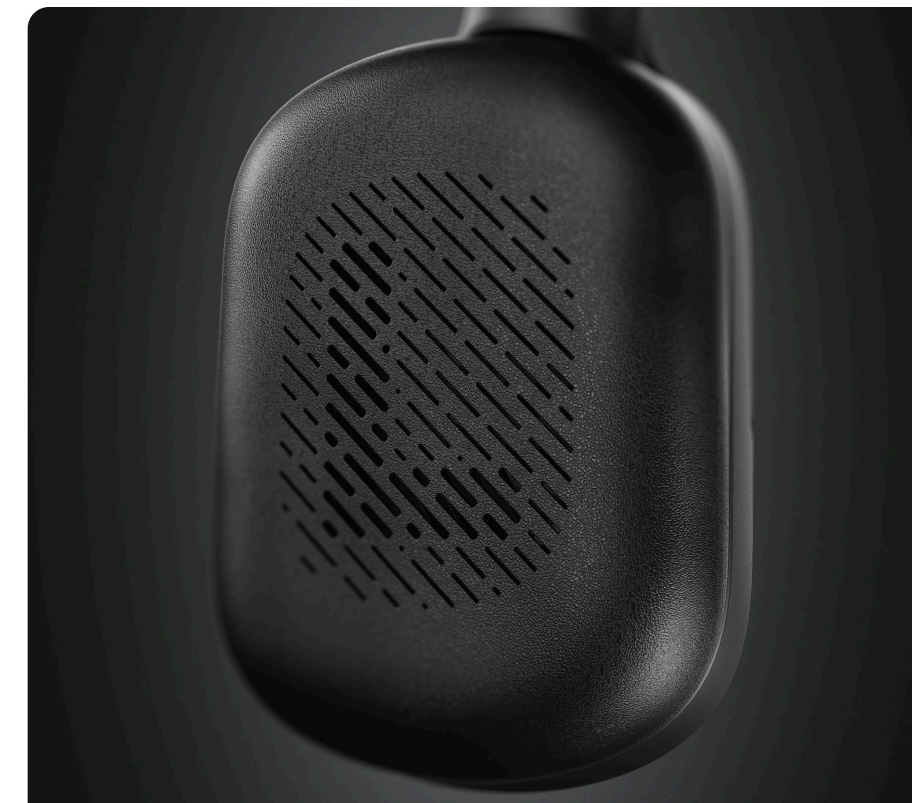

But, no matter where they work, they need tools that work.

Here's how HP Poly Focus 6 series supports mobility.

A modern, professional design

- Slim profile built for today's work styles
- Hideaway boom for a clean look when the user isn't on calls
- Oblong ear cushions designed to match the more natural ear shape
- Designed to look professional whether the wearer is at a desk, in a meeting room, or on camera

Comfort that holds up across long days

- Soft cushions to support longer wear
- Ergonomic headband engineered with a pressure-relieving gap for enhanced weight distribution and lasting comfort
- Magnetic ear cushions, easy to replace

Travel-ready, hybrid-ready

- Foldable design¹⁰ made to move between locations
- Hard-shell carrying case¹⁰ to keep it protected anywhere you go

Research shows

41% of workers value mobility to handle tasks across different spaces.⁷

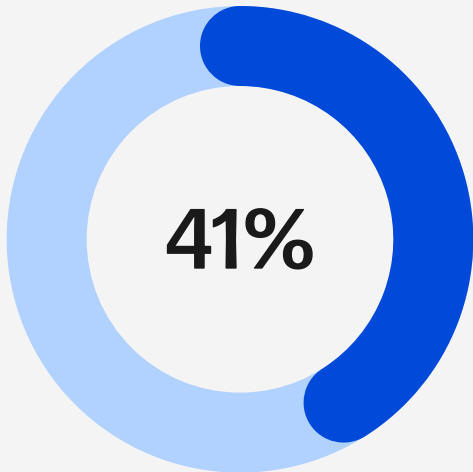

The Bottom Line

You get a headset that looks right, feels right, and moves with you—so transitions don't break your day. Your organization gets a consistent, professional experience across environments—supporting adoption and reducing "this doesn't work for me" friction.

Create a focus zone— anywhere

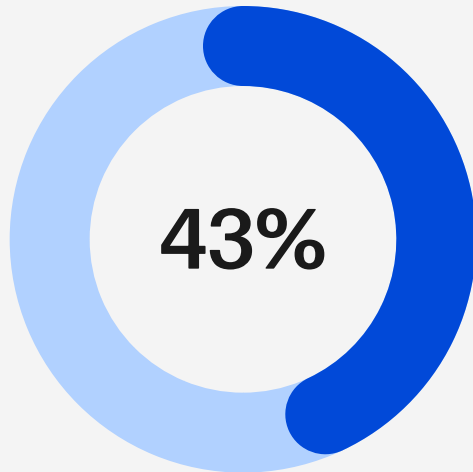

Noisy backgrounds don't just distract. They degrade meetings, increase repetition, and create an uneven experience between in-room and remote participants.

Research shows headsets are essential to focus:

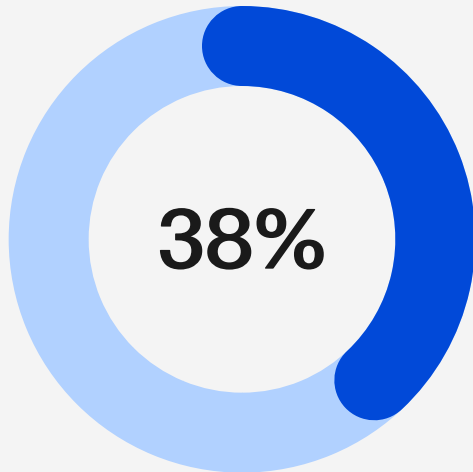

say concentration is the main reason they use them.⁸

Research also shows that headsets help people maintain quality and momentum:

say they enable high-quality work.

say they help maintain momentum.⁷

Clear calls, anywhere

- Internal and external mics found in mic boom and each ear capsule, reducing background noise so your voice comes through clearly.
- Four noise-canceling microphones help your voice come through clearly in more environments.
- Enhanced noise reduction¹¹ filters and reduces common background noise for clearer, more focused calls.
- Acoustic Fence 2.0 Technology¹¹ creates a virtual pickup bubble around your mouth, prioritizing your voice over surrounding distractions.
- Microsoft Open Office Certified – certified by Microsoft to pick up your voice, not your neighbors'.

Stay focused, stay immersed

- Hybrid Active Noise Cancellation (Hybrid ANC) reduces the background noise you hear, helping you stay focused on the conversation.
- Spatial audio creates a richer listening experience by placing sound in front of, behind, above, and beside the wearer.
- 32mm speaker drivers deliver powerful, rich sound wherever you work.

Stay aware when you need it

- Transparency mode lets you stay connected to your surroundings without removing your headset—reducing the "disconnect" feeling when moving through real spaces.

The Bottom Line

Enjoy less noise, clearer conversations, and more focus—so you stay in the moment, not managing the environment. Your organization gets more consistent meeting quality across locations—reducing “audio issues” friction and helping collaboration run smoother.

Take on the day, uninterrupted

252%
increase

Meeting time has increased 252% since 2020.

26 Meetings
per week

with the average knowledge worker's calendar now containing 26 meetings per week.⁵

That much time spent in meetings means interruption isn't occasional—it's systemic. HP Poly Focus 6 series is designed to keep work flowing with battery endurance, fast recovery, wireless freedom, and controls that reduce friction.

Battery confidence

- All-day endurance: Up to 30 hours of talk time and 52 hours of music time on a full charge.^{1,2}
- Fast recharge: 10 minutes of charging delivers up to 4 hours of talk time and 6 hours of listening.^{1,3}
- Deep sleep mode: Helps preserve battery when not in use.
- Optional wireless charge stand: Keeps your headset powered and ready at all times.

Protect your flow effortlessly

- Tactile jog wheel for quick, precise volume control.
- Smart sensors recognize when the headset is being worn and automatically play/pause audio or answer incoming calls.
- Built-in busy light signals when you're on a call.
- AI voice commands let you answer or ignore calls hands-free.

Wireless freedom

- Up to 50m wireless range with Bluetooth® Core 5.4, for freedom to roam about the office or at home
- Native Bluetooth certifications ensure direct pairing without a dongle on Microsoft Teams and Zoom.
- Stay connected as you move—at home or in the office.

Built for modern work ecosystems

- Optimized and certified to work with leading virtual meeting providers including Google Meet, Google Voice, Microsoft Teams, and Zoom.

The Bottom Line

Your day keeps moving—even when it's nonstop. Experience less battery anxiety, less plugging in, and fewer interruptions. Your organization benefits from fewer disruptions at scale, fewer avoidable support issues, and a more reliable collaboration experience across locations and roles.

Built for long-term durability

When a device is used heavily, “durable” isn’t a promise—it’s a requirement. Hybrid work can take a toll on tech. Headsets get dropped, stuffed in bags, shoved in overhead compartments, and worn for nearly 20 hours a week. That level of use makes lifecycle value and serviceability a core evaluation factor.

Serviceable by design

- Replaceable batteries extend product lifespan, with end-user replacement—no tools required. Replace a single battery, not the entire headset.
- Magnetic ear cushions enable fast, easy replacement for long-term comfort.

Designed to last longer

- TCO Certified, generation 10¹⁴—meets comprehensive sustainability standards across environmental and social responsibility throughout the product lifecycle.
- Single SKU for all supported UC—certified for Google Meet, Google Voice, Microsoft Teams, and Zoom to simplify deployment.
- HP Poly Studio centralizes device management, helping IT streamline support while enabling users to personalize settings.

The Bottom Line

You get a headset that performs consistently and comfortably. Your organization gets greater overall value through an extended lifecycle, reduced churn, and a more sustainable approach to fleet longevity.

Make the **switch**: Validate what actually matters

Before you standardize your fleet, focus on what drives performance—not just specs. Asking these questions can help you find the right fit for your team.

Can it keep people focused?

- Cuts through real-world noise (not just lab conditions)
- Delivers clear, consistent voice pickup across environments

Does it remove friction—or add it?

- Intuitive controls that don't interrupt flow
- Features like busy light and sensors that reduce disruption

Can it keep up with hybrid work?

- Maintains performance across locations and movement
- Feels comfortable enough to wear all day—without compromise

Will it perform at scale?

- Delivers a consistent experience across users, roles, and locations
- Easily connects to leading collaboration platforms

Will it last the workday—and recover fast?

- Maintains performance across locations and movement
- Feels comfortable enough to wear all day—without compromise

Is it built for long-term value?

- Designed for durability with serviceable components
- Helps reduce replacement cycles and support overhead

Make **uninterrupted** performance the standard

Hybrid work isn't slowing down. Meetings aren't decreasing.
And expectations—from employees and organizations—are only increasing.

The difference isn't just in how people work. It's whether their tools can keep up.

When performance is consistent, work flows.

When interruptions are reduced, productivity scales.

And when the experience improves, so do outcomes—across people, teams, and the business.

Explore the headset family built for uninterrupted performance—across every call, every space, and every workday.
